

Business Voice

Cloud phone systems from the leading platforms, with the numbers you already have. Desk phones, mobile apps, video meetings and chat under one login, set up and supported by one team.

What you get

Keep your numbers

We move your numbers from your current carrier. Calls keep ringing your current phones until the switch.

Rings wherever your people are

Each person has an extension that rings their desk phone, computer and cell phone app, and shows the business number.

Every call answered your way

A phone menu, call queues instead of busy signals, ring groups, and separate rules for after hours and holidays.

Voicemail, texting and fax

Voicemail by email, texting from your business number, and fax from email or the app.

Meetings and chat in the same app

Video meetings and team messaging come with it, on desktop and mobile.

The leading platforms

RingCentral and Ooma Office, recommended for how your team works, set up and supported by us.

Built for

Retail and restaurants

Card payments and phones that stay up through every rush.

Manufacturing and warehouses

Plant floors, offices and warehouses on one managed network.

Industrial and commercial

Yards, plants and remote sites, including places wires don't reach.

Multi-location businesses

Every store, branch and site on the same standard.

70+
Carriers and platforms

Verizon • AT&T • T-Mobile
Business cellular on all three

Nationwide
Service across the U.S.

Switching is on us

We design the call flow

The menu wording, who rings first, what happens after hours. You approve it before anything changes.

Phones arrive ready

Desk phones are configured before they ship and work when plugged in. People add the app to their computer and cell phone.

Switch day and after

We watch the numbers move, test calls in and out, and fix anything that day. After that, changes and problems come to us.

Copper lines that can't move to the phone system

Alarm panels, elevator phones, gate call boxes and fax lines usually stay off the phone system and move to a line replacement like Ooma AirDial, tested with your alarm or elevator company before the copper is cancelled. See the Copper Line Replacement sheet.

One team for every location

Business Internet

Fiber, cable and dedicated internet from more than 70 carriers.

Wireless & Failover

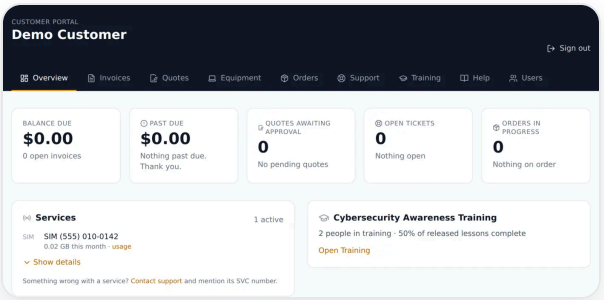

Business cellular on Verizon, AT&T and T-Mobile for primary service or automatic backup.

Network Edge

Managed firewalls, routers, SD-WAN and VPN at every location.

Every location in one portal

Your Twisted VoIP invoices and quotes, your equipment and orders, and every support ticket, for every site in one sign-in at twistedvoip.com/portal.

Let's connect every location you run.
